SALVACLIP Safe

ENGLISH

Salvaclip Safe perineal belt for armchair *to help positioning of seated patients. Especially useful for people with stability problems due to a functional disability. Perineal support prevents the patient from moving downward.*

It uses mechanical button with magnetic key opening as secure locking system. All tapes are placed toward the back of the chair, thus avoiding any manipulation of the closure by unauthorized persons. It is the safest option to keep an agitated patient controlled, always under health personnel supervision.

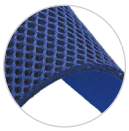

Made of tridimensional polyester material, it offers high breathability, support, and a hydrophobic surface that prevents stains from penetrating the fabric and facilitates cleaning. Reinforced polyester straps are 45mm wide.
